READ SCHOOL DATA FROM FILEC

Problem Description

This task is an extension of your week 1 OOP task.

You are to utilize your knowledge of File Reading and Writing in Java without any external libraries to read and write Teacher and Student data to and from a provided file.

In addition, you're to create an Array or Array List to persist the data at runtime.

Finally, replace all columns (specifically the isDeleted column) with "null" if the cell/column is empty.
